# CS 242 Final Project Test Plan

1. Run the app, the main page should be similar as below, notice that you can see your current level and experience above the calendar:

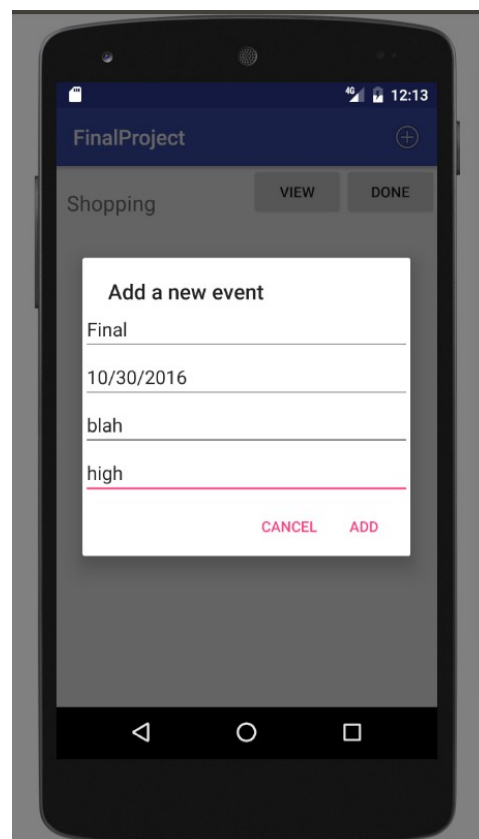

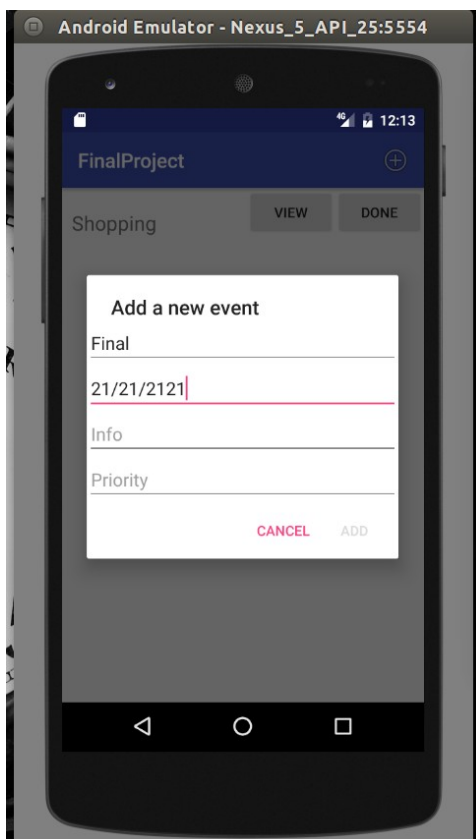

2. Scroll the calendar by clicking on the arrow buttons.

3. Click on Event. Should link to another page with a list of events.

4. Click the add button on menu bar to open dialog for new event, notice that you need to enter a valid date before you can click add.

5. Add to add new event to the list. Cancel to drop dialog. Once event is added, you'll be able to see the event in the list. Also, you can click on the calendar to see events for that day.

6. Click 'Done' to delete an event.
7. Similar with 'Note' , which is a simple reminder. Add or delete a note by clicking add or done.
Notice that you are not able to see notes if you click on a date since notes are not for a specific date.
